## TEXTURE PAINT

### decorative techniques

### ProTex™ Interior Latex Texture Finishes

- Ideal for walls and ceilings
- Decorative solution for rough and uneven surfaces
- Easy to apply
- May be topcoated with any Conco® interior paint

For more information, visit [concopaints.com](http://concopaints.com), or call 1-888-388-2426.

**Basic Tools** Required

2"-3" Polyester/Nylon Brush  
 3/8"-3/4" Nap Roller  
 Roller Frame  
 5-Gallon Bucket with Grid or Roller Tray  
 Extension Pole  
 Gloves  
 Protective Eyewear  
 Ladder  
 Painter's Tape  
 Rags  
 Drop Cloth

**General Instructions** for All Techniques**STEP 1**

To ensure proper adhesion, all surfaces must be clean, dull and dry. For best results, prime the surface with Conco® P001 Drywall PVA Primer/Sealer.

**STEP 2**

Gather the basic tools listed above, as well as any special tools needed to complete your desired technique.

**STEP 3**

Use painter's tape to mask the corners and trim. Cover flooring with a drop cloth.

**STEP 4**

Pour ProTex™ texture paint into a 5-gallon bucket with grid or into a roller tray, and stir until mixed well.

**STEP 5**

Using a 2"-3" polyester/nylon brush, cut in a 3' strip at the ceiling edge and in the corner.

**STEP 6**

Load and completely saturate the 3/8"-3/4" nap roller.

**STEP 7**

Apply a heavy coat of texture paint to a 3' x 3' section with the nap roller, reloading the roller as necessary. Texturize it with one of the following techniques.

**Grooved Texture Finish**

*Specific tools needed* — Whisk Broom

*Product* — ProTex™ Smooth or Sand Interior Latex Texture Paint

Complete General Steps 1-7.

**STEP 8**

Starting at the top of the 3' x 3' section and working your way down, drag a whisk broom through the texture paint in one direction. After each stroke, wipe excess texture paint off of the whisk broom with a rag. Continue until the entire 3' x 3' area is complete, leaving a wet edge in which to blend the next section.

**STEP 9**

Repeat steps 5-8, working your way down the wall, then back up to the ceiling to start a new column until you have completed an entire wall. Slightly overlap sections for best blending.

**Grooved Texture Finish** (featured in Sand texture paint)  
**Topcoat:** Conco Paints® Wolf's Howl 26-3

**Stippled Texture Finish**

*Specific tools needed* — 9" Looped Texture Roller Cover, 9" Roller Frame

*Product* — ProTex Smooth or Sand Interior Latex Texture Paint

Complete General Steps 1-7.

**STEP 8**

Without loading the loop texture roller, roll it over the 3' x 3' section of texture paint in multiple directions to create an evenly textured finish. Leave a wet edge in which to blend the next section.

**STEP 9**

Repeat steps 5-8, working your way down the wall, then back up to the ceiling to start a new column until you have completed an entire wall. Slightly overlap sections for best blending.

**Stippled Texture Finish** (featured in Sand texture paint)  
**Topcoat:** Conco Paints Castle Bluff 22-3

**Knockdown Stucco Texture Finish**

*Specific tools needed* — Hopper Gun and Air Compressor, Drywall Taping Knife

*Product* — ProTex Smooth, Sand or Coarse Interior Latex Texture Paint

Complete General Steps 1-3.

**STEP 4**

Apply a coat of Conco® P001 Drywall PVA Primer/Sealer. Allow to dry.

**STEP 5**

Follow hopper gun manufacturer's instructions for proper setup and use of the equipment. Spray a 3' wide strip of texture paint from ceiling to floor, allowing some of the surface to show through. About 75% of the surface should be covered.

**STEP 6**

Starting at the top of the 3' strip and working your way down, lightly smooth a drywall taping knife over the texture paint in one direction. After each stroke, wipe excess texture paint off the knife with a rag. Continue until the entire 3' strip is complete, leaving a wet edge in which to blend the next section.

**STEP 7**

Repeat steps 5-6 until you have completed an entire wall. Slightly overlap sections for best blending.

**Knockdown Stucco Texture Finish** (featured in Sand texture paint)  
**Topcoat:** Conco Paints Playful Dolphin 30-3

**Popcorn Texture Finish**

*Specific tools needed* — 9" Looped Texture Roller Cover, 9" Roller Frame

*Product* — ProTex Coarse Interior Latex Texture Paint

Complete General Steps 1-7.

**STEP 8**

Without loading the looped texture roller cover, roll it over the 3' x 3' section of texture paint in multiple directions to create an evenly textured finish. Leave a wet edge in which to blend the next section.

**STEP 9**

Repeat steps 5-8, working your way down the wall, then back up to the ceiling to start a new column until you have completed an entire wall. Slightly overlap sections for best blending.

**Popcorn Texture Finish** (featured in Coarse texture paint)  
**Topcoat:** Conco Paints® Greened Grove 73-1

**Swirled Texture Finish**

*Specific tools needed* — Natural Sea Sponge, Plastic Grocery Bag

*Product* — ProTex Smooth or Sand Interior Latex Texture Paint

Complete General Steps 1-7.

**STEP 8**

Dampen sea sponge to soften it, and wring out excess water until almost dry. Tightly wrap sponge in an inside-out plastic grocery bag. Lightly press the wrapped sea sponge into the applied texture paint, and twist until a swirl is created. Lift wrapped sponge off surface, reposition it, and continue to create overlapping swirls until the entire 3' x 3' section is texturized. Leave a wet edge in which to blend the next section.

**STEP 9**

Repeat steps 5-8, working your way down the wall, then back up to the ceiling to start a new column until you have completed an entire wall. Slightly overlap sections for best blending.

**Swirled Texture Finish** (featured in Smooth texture paint)  
**Topcoat:** Conco Paints Zipped Gray 35-3

**Pebble Splatter Texture Finish**

*Specific tools needed* — Hopper Gun and Air Compressor

*Product* — ProTex Smooth or Sand Interior Latex Texture Paint

Complete General Steps 1-3.

**STEP 4**

Apply a coat of Conco® P001 Drywall PVA Primer/Sealer. Allow to dry.

**STEP 5**

Follow hopper gun manufacturer's instructions for proper setup and use of the equipment. Apply the texture paint over the entire wall or ceiling at once, allowing some of the surface to show through. About 75% of the surface should be covered.

**Pebble Splatter Texture Finish** (featured in Sand texture paint)  
**Topcoat:** Conco Paints Porcelain Chip 23-1
